## PROJECTS

### Admin System for EdAble — 2022

An administration system for creating and managing donation item campaigns that are listed on EdAble's main website. Displays infographics of donation history and generates donation reports. Built using Angular and Firebase services for data storage and authentication.

### NBA Predictions App — 2021

A full stack application that allows users to create their own NBA dream teams. Compare different teams to see which is more likely to win using a custom algorithm which compares the player's efficiency rating. Built using Angular, SQL, .NET, Auth0.
